Personal Profile

MSc Cybersecurity student building IAM, GitOps, and container security systems. Built a deny-first IAM engine with ML-based login risk scoring, cutting CI security issues via automated SonarCloud/CodeQL gates. Shipped a signed-image GitOps pipeline (Trivy, Cosign, Kyverno) enforcing admission-time policy on Kubernetes, with observability built into every deployment.

Technical Skills

Cloud & AWS: EC2, IAM, S3, VPC, CloudWatch, CloudTrail, Systems Manager, ECR
DevOps: Linux, Terraform, Docker, Kubernetes, ArgoCD, GitHub Actions
Security: Trivy, Cosign, Falco, SonarCloud
Observability: Prometheus, Grafana, Datadog, OpenTelemetry
Languages: Go, Python, Bash, SQL, HCL

Projects

Bastion - IAM | 🌐 🌐

Node.js · PostgreSQL · Python | Docker · Kubernetes · ArgoCD · Terraform · ECR | Grafana · Datadog

- Built a **deny-first** IAM policy engine with role inheritance and simulation; auth covers **TOTP MFA**, OAuth 2.0, JWT refresh rotation, and step-up verification for sensitive actions.
- CI runs **SonarCloud** quality gates and **CodeQL** on every PR — cut security issues **87.4%** in 30 days; CD builds multi-stage Docker images, pushes to AWS ECR, and patches **Kustomize** overlays via ArgoCD, provisioned on EC2 via **Terraform**.
- Deployed a FastAPI risk engine scoring logins against action type and response timing via **Isolation Forest**. Model versions tracked in **MLflow** with daily retraining via CronJob; high scores trigger step-up MFA or block the request.
- SealedSecrets** keep credentials out of plaintext Git; **Falco** streams syscall alerts to Datadog Security Signals; **Datadog APM** traces Node.js/Python requests; Prometheus + Loki + Grafana cover metrics and logs.

Kost - K8s Cost Agent | 🌐

Go · client-go | Kubernetes · Docker | Prometheus · Slack API

- Finds over-provisioned **Kubernetes** workloads and hands back the exact `kubectl` command to fix them — scans every **15 min**, flags waste past **\$5/month**, no dashboard or database required.
- Runs as single-lightweight (**~25MB**), non-root, read-only agent with live **Prometheus** metrics, **Slack** alerts, and **SonarCloud**-gated CI.

HookDrop - Webhook Receiver | 🌐

Go | Kubernetes · Helm · ArgoCD · ECR | Trivy · Cosign | GitHub Actions

- Webhook capture service in Go — accepts any POST to a bucket URL, stores last 50 events in-memory, and streams arrivals live via SSE (under **35ms** latency) with trace ID logging.
- GitOps** pipeline - GitHub Actions runs **Trivy** scans, signs images with **Cosign** OIDC, pushes to **AWS ECR**, and bumps Helm values so ArgoCD syncs automatically. Renovate handles dependency PRs.
- Hardened runtime - non-root UID, read-only filesystem, dropped capabilities. **Kyverno** blocks latest tags, missing resource limits, and unsigned images at admission. **OpenTelemetry** traces, **Prometheus** metrics, and **Loki** logs feed Grafana with **Alertmanager** on top.

Education

Gujarat Law Society (GLS)

Master of Science (Cybersecurity)

Ahmedabad, Gujarat
2026 – 2028

Charotar University of Science and Technology (CHARUSAT)

Bachelor of Computer Applications | CGPA: 8.9

Nadiad, Gujarat
2023 – 2026

Certifications

- AWS Cloud Practitioner Essentials
- AWS Cloud Quest: Cloud Practitioner
